US BioPharma Firm Boosts Efficiency with DevOps Platforms

Key Challenges

- Limited Cloud Expertise: A leading BioPharma struggled with limited DevOps experience in their cloud environment

- Manual Processes: Manual cloud infrastructure tasks hampered agility and efficiency

- Resource Bottleneck: Lack of a centralized DevOps platform slowed down development and deployment cycles

Business Solution

- We Constructed an On-Demand Infrastructure Pipeline that utilized the playbooks to build common infrastructure configurations

- Our combined DevOps and security expertise optimizes development, deployment, and security throughout the software lifecycle

- We leverage 'Infrastructure as Code' to automate infrastructure provisioning, ensuring consistent & secure cloud environments

Business Impact

75%
faster deployments with a single Service Now request

50%
reduced human errors & rework

50%
projected reduction of Infrastructure Cost
